

Creating a Security Lab Environment

By: Jennifer Frazier

What is this project about?

- There are 2 different parts to this project
 1. Creating the environment
 2. Gathering and documenting security tools

What is JSS?

- Bash script
- File system inside of a file system
- Rsync

Steps for Categorizing and Documenting Security Tools

1. Decide upon the categories
2. Collect the tools
3. Decide what information is necessary to record regarding the tools.

Webpage

1. Table and hierarchical listing of security categories
2. JSS source code as it is being developed
3. Listing of commands and libraries that will be required for JSS
4. Will include recorded documentation and source code for all security tools
5. Listing of security tools to be added to the database
6. Paper submitted to the NCISSE conference
7. A lot of neat “under construction” gifs

That's ALL folks ...
