

cc_common_rubric (3).txt

1. Using a specific software package

The specific software package we choose for assessing students' performance is C/C++ compiler gcc/g++, together with the project management software "make". Students should master the fundamental usages of make and gcc/g++, and should be able to manage all programs in a project using make, and compile all programs in a project using gcc/g++.

RUBRIC

Makefile
Project compilation

2. Performing transactions using web/Internet.

In this course, students need to access course materials online. The specific assessment is done based on online submission of a programming assignment.

RUBRIC

online submission of programming assignment.
